(b) Specific hazards arising from the hazardous product, such as the nature of any hazardous combustion:

"Empty" containers retain product residue and can be dangerous. This product contains a component(s) that is considered a combustible liquid, which has vapors that are heavier than air and may travel along the ground or be moved by ventilation and ignited by heat, pilot lights, or other flames and ignition sources at locations distant from the material's handling point. Product is water based material, containing minor amounts of combustible ingredients.

(c) Special protective equipment and precautions for firefighters:

Do not direct a solid stream of water or foam into hot burning pools, this may cause frothing and increase fire intensity.
